NEXT GENERATION TECHNOLOGIES: PRACTICAL GUIDANCE FOR SUCCESS with Jugna Shah, MPH

Providers struggle with how to report and price new, innovative and sometimes very expensive therapies for drugs, devices and procedural services. An example is CAR-T especially if no codes exist and when there are debates on what charges should be included given the product code description. This session will walk providers through coding, charging and billing strategies as well as Medicare's rules/citations on appropriate charging practices which impact the outlier and new tech add-on payment. We will show how provider charges fundamentally impact the ability or inability to generate outlier and/or new technology add-on payment (NTAP).

Day Two: Breakout Session 8 3:45–5 p.m.

IMPLEMENTING THE NEW OUTPATIENT LAB DOS EXCEPTION

The 2018 OPPS final rule changed the current clinical laboratory date of service (DOS) policies for outpatient molecular pathology tests and advanced diagnostic laboratory tests (ADLT), since they are now excluded from the OPPS packaging policy for laboratory tests. Although CMS has not yet designated any tests as ADLTs, it is critical for facilities to begin working through operational and reference lab contracting issues to implement the required changes for molecular pathology tests. These tests are paid separately under the Clinical Laboratory Fee Schedule (CLFS) rate and are not packaged into outpatient hospital Ambulatory Payment Classification (APC) payment rates, even when they are performed on the same date of service and/or billed on the same outpatient claim.
